

SUBSEA NUTSPLITTER

DESCRIPTION

In a situation that requires fast removal of bolt from a flange, the **Hydraulic Nut Splitter** comes into its own. The Subsea Nut Splitter is the ideal tool for removing nuts that have seized up or corroded. They are designed with a double acting hydraulic cylinder.

The Heavy Duty Blades can be easily removed to make re-grinding and replacement possible. In addition to the standard features, which are generally associated with Hydraulic Nut Splitters, our system also provides the following, additional benefits:

FEATURES

- Tripple edge disposable cutting blade
- They will crack the most robust nuts up to 5 3/8"AF
- Blade positioning scale to eliminate bolt damage
- Adjustable cutting depth achieved by rotating the cylinder
- Sizes range from 3/4" - 3 1/2" bolt diameters
- Designed to fit BS1560/ANSI B16.5 flanges
- Versatile, reliable and trouble free operation
- Compact and ergonomic design making it easy to use
- Uniquely angled head design
- Double acting hydraulic cylinder
- Heavy duty chisels can be re-ground
