

# PRESSURE TESTING

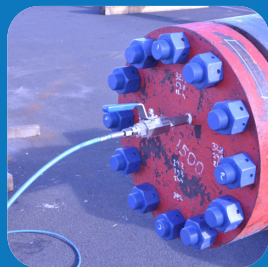

Integrated **Solutions** to Piping Problems | [www.patriot-int.com](http://www.patriot-int.com)

When a pipeline or vessel needs to be tested, there are a range of possibilities in which that test can be undertaken. Hydrostatic pressure testing is one of the more commonly used where the test medium is water.

Alternatively gasses such as Air can be used and in some of the most stringent test requirements, Nitrogen/Helium leak detection is used to identify the smallest of leak paths.

At Patriot International we can cater for all your testing and line drying requirements. In conjunction with our mechanically completion services, we aim to assemble, mechanically complete and commission a piping system as one integrated project.

In doing this we can ensure more efficient utilisation of a smaller but multi-skilled team on site. The project can flow seamlessly from one stage to the next and with a minimum of personnel 'stand time' as each technical discipline will be assisting the other. Benefits in terms of cost, time and resource can all be realised and not just in a small way.
